DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 21-30 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-15 of U. S. Patent No. 6,537,248.

Although the conflicting claims are not identical, they are not patentably distinct from each other because the scope of the invention described in the pending claims is broader.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 21-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mulier et al (5,431,649) in view of Daulton et al (6,322,559) or in view of Parins et al (5,125,928).

Art Unit: 3763

Mulier et al disclose an invention substantially as claimed (Figures 3-5). However, Mulier et al do not specifically disclose the use of dual helical coils in parallel relationships.

On the other hand, Daulton et al teach the use of dual helical coils (22 & 24) in parallel relationships (abstract, Figures 3 & 4, claims 1 & 7). Similarly, Parins et al teaches the use of dual helical coils (31 & 33) in parallel relationships (Figure 2 & 6).

Therefore, it would have been obvious for one skilled in this art to modify the invention to Mulier et al to design the helical coils as electrode needles to have them wound in parallel relationship, as taught to be desirable in Daulton et al or Parins et al.
